

How to use Vizlib Demo Apps

What is a Vizlib demo app? A Vizlib demo app is a short demonstration of how Vizlib products help uncover insights in the data in a visually appealing way.

Demo apps can help inspire your own app creation and show what's possible with Vizlib's value-added products. Each one illustrates specific Vizlib solutions to save time getting started, spark new ideas, or as a starting point for customisation.

Get started in 3 easy steps:

1. Create a free Vizlib account (if you don't already have one) by registering [here](#).
Note: To use our demo apps, you'll need to be both a Qlik Sense user AND have a Vizlib account with the relevant products or extensions installed in QS.
2. Select the app you want to download from the [Vizlib App Gallery](#).
3. Import the app into your Qlik Sense Server or copy to your Qlik Sense Desktop apps folder. Use it to kick off your own dataviz customisation and get inspired!

Here are a few extra resources to help you get started with Vizlib:

More technical detail on how to install Vizlib extensions
